

# Introducing: **PROJECT ATLANTIC**

## Acquisition Opportunity

Acqius has been retained to advise on the sale of a  
**World-Class Capacitive Sensing Technology Portfolio.**

This is a rare opportunity to acquire a **fully developed, field-proven, and globally certified capacitive-sensing technology platform** with ultra-high margins, immediate scalability, and multi-sector commercial potential.

### KEY HIGHLIGHTS

- **Proven, De-Risked Technology Platform:** 20+ years of engineering refinement with rigorous field validation across Oil & Gas and emerging industrial applications, eliminating development and certification risk
- **Exceptional Gross Margins (85%+):** highly standardized, modular products with low manufacturing cost and immediate profitability when integrated into an existing sales/distribution engine
- **Serving Multi-Billion CapEx Markets:** applications across crude oil, refined fuels, industrial liquids, chemicals, lubricants, aviation, food/pharma, and more; with new use-cases continually emerging
- **Turnkey Scalability:** simple, non-capital-intensive assembly; supply chain fully outsourceable; products ready for drop-in absorption into a buyer's manufacturing, sales, and service structure
- **Unique Competitive Position:** no directly comparable solutions on the market; high barriers to replication; early adoption in multiple sectors validates significant opportunity

**Huge expansion potential for the right acquirer – OFFERS INVITED**

### SUMMARY

Project Atlantic offers a strategic acquirer a highly unusual opportunity: a **mature, globally certified, and technically superior sensing platform** that has been intentionally refined rather than aggressively commercialized. With decades of engineering investment, more than **\$2M in R&D** already deployed, and a newly completed line of versatile capacitive sensors ready for scale, the business is positioned as a **plug-and-play growth engine** for any organization with established distribution channels. Legacy products, trusted by global operators such as Shell, Chevron, BP, and Petrobras demonstrate long-term reliability and sustained inbound demand, while the new product line opens large, multi-sector markets with significant addressable opportunity. With **85%+ average margins, simplified manufacturing, and no operational complexity to inherit**, this acquisition represents a technology-driven platform with immediate integration value and significant upside for a buyer capable of unlocking its global potential.
